The AL-2 is a novel Eph-related tyrosine kinase receptor ligand. AL-2 can be administered to patients in combined the nervous system has been damaged by trauma, surgery, stroke, ischaemia, infection, metabolic disease, nutritional deficiency, contoxic agents, to promote the survival or growth of convergency, or toxic agents, to promote the survival or growth of convergency contoxic assertions (Lou Gebrig's disease), Bell's palsy, and convergency conditions involving spinal muscular atrophy, or paralysis. AL-2 can be used to treat human neurodegenerative disorders, such as convergency of sisease, and other disorders, such as such as multiple sclerosis, Huntingtons chorea, Down's syndrome, and the care of the cerebellum. The such as completive enhancer, to enhance learning particularly convergency of hippocampal neurons that express can be used as cognitive enhancer, to enhance learning particularly convergency of hippocampal neurons that express can also be used for wound healing, i.e. accelerating envolutions and ulcers. The encoding nucleic acids are useful in preparing antibodies that specifically bind to the AL-2 can also be used for wound healing, i.e. accelerating convergency of the protein of the AL-2 antagonists are useful in diagnosing and treating various neuronal disorders. AL-2 antagonists can be used for the treatment of tumours, acute mysloid leukaemia (AML), chronic mysloid leukaemia (CML), diabetic retinopathy, neovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 455;

CT This is a AL-2-short (AL-2s) protein. The AL-2 is a novel Eph-related CC tyrosine kinase receptor ligand. AL-2 can be administered to patients in CC whom the nervous system has been damaged by trauma, surgery, stroke, CC ischaemia, infection, metabolic disease, nutritional deficiency, CC malignancy, or toxic agents, to promote the survival or growth of CC neurons. They can be used to treat motoneuron disorders such as CC various conditions involving spinal muscular atrophy, or paralysis. AL-2 CC can be used to treat human neurodegenerative disorders, such as CC various conditions involving spinal muscular atrophy, or paralysis. AL-2 CC can be used to treat human neurodegenerative disorders, such as CC various conditions and neurodegenerative disorders, such as CC various is such as multiple sclerosis, Huntingtons chorea, Down's syndrome, CC diseases such as multiple sclerosis, Huntingtons chorea, Down's syndrome, CC can be used as cognitive enhancer, to enhance learning particularly in dementias or trauma, since they can promote axonal outgrowth and CC synaptic plasticity, particularly of hippocampal neurons that express
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW33699;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human AL-2 neurotrophic factor and related DNA - used to develop products for, e.g. treating neurologic disorders, angiogenesis disorders, tumours or rheumatoid arthritis or for wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAW33699

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AL-2 binding Eph-family receptors and cortical neurons that express AL-2. AL-2 can also be used for wound healing, i.e. accelerating neovascularisation of, e.g. burns and ulcers. The encoding nucleic acids are useful in preparing antibodies that specifically bind to the AL-2 protein. The antibodies and the AL-2 antagonists are useful in diagnosing and treating various neuronal disorders. AL-2 antagonists can be used for modulating angiogenesis. They can also be used for the treatment of tumours, acute myeloid leukaemia (AML), chronic myeloid leukaemia (CML), myeloidysplastic syndrome (MDS), diabetic retinopathy, neovascular glaucoma, psoriasis and rheumatoid arthritis.

The amino acid sequence was deduced from a human foetal CC brain cDNA clone (see AAT89519). Lerk-8 binds to the cell surface receptors hek and elk, which are members of the eph/elk family of CC polypeptides comprising amino acid residues -27 to 142-197 of the CC polypeptides comprising amino acid residues -27 to 142-197 of the CC full-length protein, can be expressed in transformed host cells. CC procedures of intervention of the compression of

                                                                                                                                                    A novel human ligand for eph-related kinase (LERK) is designated NIERK2 (AAWI0637). It is encoded by a cDNA clone (AAT60966) obtd. from a human foetal brain cDNA library. The novel receptor ligand can be expressed in transformed host cells and used in methods for regulating the development, maintenance or regeneration of different cells (e.g. neurons) and tissues in vivo and in vitro. Soluble NLERK2 peptides can be used to treat injury, disease or abnormality in the nervous system, and membrane-bound NLERK2 to modulate proliferation, different or survival e.g. in grafting procedures or transplantation. NLERK2 can also be used to raise antibodies for use in immunotherapy, and to detect anti-NLERK2 antibodies that may occur in some autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NLERK2 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23-JUN-1997

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
A novel ligand (AAW17081), designated Ef1-6 (or Eph transmembrane tyrosine kinase family ligand 6), binds to the ElK, Nuk/Cek5, Hek2/Sek4, Htk and Sek1 receptors on cells. Its amino acid sequence was deduced from a human frontal cortex cDNA clone (AAT69808). Recombinant Blf-6, truncated soluble polypeptides comprising the extracellular denain of Elf-6, and Ef1-6 ligandbodies comprising soluble Ef1-6 and the Fc portion of IgG cable expressed in host cells. These can be used to support neuronal

CC Elk-related receptor tyrosine kinase (ERRTK). A novel method of CC modulating the biological activity of, or for affecting a pathway CC regulated by, a transmembrane ligand for an ERRTK in a cell CC expressing the transmembrane ligand comprises forming a complex CC between a purified and isolated oligomerised ERRTK, or an isoform CC or an extracellular domain of the ERRTK, and the transmembrane CC evaluating a substance for its ability to modulate the biological CC explainting a transmembrane ligand for an ERRTK, and to identify CC substances that affect or modulate a pathway regulated by a ERRTK. CC A purified and isolated oligomerised ERRTK can be used in the CC greparation of a medicament for modulating neuronal development or regeneration in a subject, or in a medicament for modulating complexation of a medicament for modulate axonogenesis, nerve cell cregenerations and regeneration, to treat diseases and conditions con the methods can be used to modulate axonogenesis, nerve cell created in the methods can be used to modulate axonogenesis, nerve cell created in the substances identified by the methods can be used to modulate axonogenesis, nerve cell created in the methods can be used to modulate expenses and conditions continued to the methods can be used to modulate expenses and conditions continued to the methods can be used to modulate expenses and conditions continued to the methods can be used to modulate expenses and conditions continued to the methods can be used to modulate expenses and conditions continued to the methods can be used to modulate expenses and conditions continued to the methods continued 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This

                                                                                                                                                                                                                                                                                                                                                Mouse Eph receptor ligand ELF-2 (AAW00287) is strongly expressed in the anterior hindbrain and newly-forming somities of embryos at the early organogenesis stage of development. It is important in cellular communication during pattern formation. Its amino acid sequence was deduced from a CDNA clone (AAT40230) isolated from a newborn mouse brain cDNA library. The ELF-2 ligand can be used to alter neurological development, oncogenesis and growth regulation, to modulate binding of ELF-2 to the Eph receptor, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eph receptor ligand, ELF-2, and DNA encoding it - used t prevent neurological diseases, and to modulate binding c Eph receptor, e.g. to prevent or treat tumour formation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                 The DNA is used to produce recombinant ligands; for tissue-
specific typing (partic. as a marker for breast cancer) and as a
marker for human chromosome 13. The ligands (partic. in soluble
form) are used to activate the tyrosine kinase domain of the
Htk receptor, i.e. to stimulate or inhibit growth, differentiation,
and/or activation of cells contg. the receptor, e.g. treatment
of neurodegenerative diseases, since they are strongly expressed
in the cerebral cortex, hippocampus, striatum and cerebellum.
The ligands are also useful as a control or standard in assays,
for generation of antibodies, as a mol. wt. marker, for growth
in vitro of Htk-receptor positive cells, as research agent,
in greaning are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse (AAT16470) and human (AAT16471) Htk ligand which bind to, a activate, the Htk receptor, have been identified in a variety of tissues using a soluble Htk-Fc fusion protein.

The predicted mol.wt. of the murine Htk ligand protein following signal peptide cleavage is 34 kD with an estimated pI of 8.9.

The murine and human ligands show 96% homology at the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ligand for the hepatoma trans-membrane kinase receptor - useful for stimulating and inhibiting cells carrying the receptor, e.g. for treating neuro-degenerative disease {\sf trans}

Elk-L exhibits neurotrophic and neuroprotective properties, and has a calculated mol. wt. 35180 daltons and a pl of 9.006. The elk-L cDNA, isolated from a human placental cDNA library, can be radiolabelled and used as a probe for isolating other mammalian elk-L cDNA, Elk-L can be used to treat neural tissue disorders, partic. excito-toxicity associated injuries or disorders, and as a neural culture reagent, while immunogenic fragments of elk-L can be

                                                                                                                                                                                                                                                                                                                                                                                       This is the amino acid sequence of the human elk-L protein, a new cytokine that is the ligand for the elk tyrosine kinase receptor. The extracellular domain of the protein (amino acids 1-213) is used to generate a fusion protein comprising the FC polypeptide of the human immunoglobulin G1 (extending from the hinge region to the C-terminus). The fusion protein (which has the same activities as the natural elk-L protein) has neuroprotective and neurotrophic activity so is potentially useful for treating a wide range of neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Soluble fusion proteins of human elk-ligand and Fc fragment - and their dimers and oligomers, useful a neuro-protectants and neurotrophic agents

                                                                                                                                                          The present sequence is a human elk ligand (elk-L) protein, which binds elk, has a calculated molecular weight of 35180 and an isoelectric point of 9.006. Elk-L is a cytokine that can be used to test cells for elk expression, measure the biological activity of elk, purify elk by affinity chromatography and as a neuroprotective agent to treat diabetic, hereditary and nutritional neuropathies and neurodegenerative diseases. It may along the to tissue cultures to prolong the life of neurons. The elk-L cDNA was isolated from a human placental cDNA library, and is present as a cDNA insert in the recombinant vector deposited in strain
                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   118
```

The present sequence represents human elk-L (elk ligand). The present invention describes antibodies to elk-L polypeptides. The elk-L protein is known to be neuroprotective exhibiting its effect through a trophic mechanism. Examples of diseases that may be treated with elk-L include neuropathies e.g. diabetic, hereditary and nutritional neuropathies,

It has homology with B61 (Ef1-1) and Ef1-2. Ef1-3 appears to comprise a conventional transmembrane protein with a cytoplasmic domain. Ef1-3 is useful for identifying other ligands for Ehk-1, -2, -3. Eck and Elk receptors. The ligands are useful in promoting a differential function and/or influencing the phenotye, such as growth and/or proliferation, of receptor bearing cells. They may be used in the diagnosis, and treatment of neurological disorders.

It is strongly expressed in the anterior hindbrain and newly-forming somites of embryos at the early organogenesis stage of development. Its maino acid sequence was deduced from a cDNA clone (AAT40231) isolated from a chicken cDNA library. The ELF-2 ligands can be used to alter neurological development, oncogenesis and growth regulation, to modulate binding of ELF-2 to the Eph receptor, and in diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eph receptor ligand, ELF-2, and DNA encoding it - used t prevent neurological diseases, and to modulate binding o Eph receptor, e.g. to prevent or treat tumour formation.

The mature protein contains within this sequence contains the N-terminal fragment represented by AAW06332. The proteins of the invention have a molecular weight of 23500 (plus or minus 1500) Da, and are positive for Coomassie staining and PAS staining. The proteins of the invention bind to the fragment of this protein sequence represented by AAW06330. The proteins of the invention are new ligands of receptor-type tyrosine kinases, and can be prepared by standard
                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09-NOV-1994;

The ligand plays a role in the differentiation process and the specific ligand target is expressed in undifferentiation blood cells.

                                                                                                                                                                                                                                                                                                  The DNA is used to produce recombinant ligands; for tissue-
specific typing (partic. as a marker for breast cancer) and as a
marker for human chromosome 13. The ligands (partic. in soluble
form) are used to activate the tyrosine kinase domain of the
Htk receptor, i.e. to stimulate or inhibit growth, differentiation,
and/or activation of cells contg. the receptor, eg. treatment
of neurodegenerative diseases, since they are strongly expressed
in the cerebral cortex, hippocampus, striatum and cerebellum.
The ligands are also useful as a control or standard in assays,
for generation of antibodies, as a mol. wt. marker, for growth
in vitro of Htk-receptor positive cells, as research agent,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse (AAT16470) and human (AAT16471) Htk ligand which activate, the Htk receptor, have been identified in a v tissues using a soluble Htk-Fc fusion protein. The predicted mol.wt. of the murine Htk ligand protein signal peptide cleavage is 34 kD with an estimated pI of The murine and human ligands show 96% homology at the a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence represents a full-length LERK-5 cytokine, which binds elk and hek receptor protein-tyrosine-kinases (members of the eph/elk family), and expressed from a gene isolated by amplification with primers specific for a chromsome-13 expressed sequence tag, GenBank L13189, from a human T-lymphocyte leukaemia CCRP-HSB-2 (ATCC CCL 120.1) cell line, followed by cDNA probe screening of a human fetal brain cDNA library in phage lambda-gtl0. A truncated soluble form may also be produced. The protein may be produced as a recombinant fusion protein or dimer with an antibody Fc fragment or e.g. a FLAG affinity tail (R89288). LERK-5 may be used in binding assays to detect elk- or hek-expressing cells, to measure elk or hek activity, as a drug delivery for elk or hek receptor-specific cell therefore, e.g. for delivery of cytostatic agents in leukaemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA encoding LERK-5 cytokine capable of binding elk and hek - used as carrier to deliver attached (anti-leukaemic) agents to cells bearing elk or hek, i.e. human leukaemia cell lines JM and LK63

These sequences are included in the LPM medium of the invention. The medium is used to culture cells capable of producing a ligand for receptor-type tyrosine kinase. The ligand serves as a physiologically active substance to induce enzyme activity and autophosphorylation of tyrosine kinase, which is involved in the development and differentiation of animal and insect cells. The ligand can also be used as in a pharmaceutical preparation for promoting growth of undifferentiated cells. The medium may also include an inducer, such as insulin, an interleukin, a fibroblast growth factor, or interferon-gamma.

                                                                                                                                                                                                                                                                                                                                                                                                                     AAW06333 and AAW06334 represent receptor-type tyrosine kinase receptor binding ligands of the invention. These sequences both have the N-terminal sequence represented by AAW06332. The ligands of the invention recognise the fragment of the receptor type kinase receptor represented by AAW06330 (see AAW06331 for full length sequence). The proteins of the invention have a molecular weight of 23500 (plus or minus 1500) Da, and are positive for Coomassie staining and PAS staining. The protein is a new ligand of receptor-type tyrosine kinases, and can be prepared by standard recombinant techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 7;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A ligand polypeptide which binds to the extracellular part of a specific receptor-type tyrosine kinase and induces phosphorylation of tyrosine within the cell can be used in the study of the differentiation of blood cells such as the haematopoietic stem cells; of disease processes such as leukaemia, and of the biology of bone marrow transplantation. The ligand plays a role in the differentiation process and the specific ligand target is expressed in undifferentiated blood cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 162-163; 193pp; Japanese.

The patent discloses a complex comprising of a B class ephrin and PDZ domain containing protein. B class ephrins function as ligands for Eph receptor tyrosine kinases (RTK) and possess a transmembrane element and a highly conserved cytoplasmic tail at the C-terminus, that contains a PDZ binding site. This complex is used in methods to modulate the interaction of a B class ephrin and pDZ domain containing protein and to identify modulator compounds. It is also used for modulating cellular processes like, axonogenesis, nerve cell interactions and regeneration of nerve cells. The complex is also useful for treating protein complex. The present sequence is the human ephrin B3 C-terminal cytoplasmic domain, comprising conserved sequences reminiscent of known or predicted binding sites for PDZ domains. Ephrin B3 is also known as NLERK-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cellular process; nerve cell interaction, regeneration of nerve cel axonogenesis; antiproliferative; proliferative disorder; treatment; differentiative disorder; human; cytoplasmic domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-SEP-2000
production of homogenous forms of clustered ligands is broadly applicable to improve the affinity and/or increase the activity of a ligand as compared to the native form of the ligand. Ephrin fusion proteins have been constructed, which may be useful for treating neurological
                                                                      Polynucleotide encoding a fusion polypeptide, useful for promoting differential function and influencing phenotype, comprises two subunits containing at least one copy of the receptor binding domain of a ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ephrin-B2-Ephrin-B2-FC fusion protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC disorders. The ephrin fusion proteins are preferably capable of binding to Elk receptor and are especially Ef1-6 antagonists. The fusion proteins CC were constructed after it was demonstrated that similar improved CC activities could be achieved using Tie-2 receptor ligands.

CC Angiopoietin-1 (Ang-1) is a Tie-2 receptor ligand and is an agonist for CC Tie-2, whereas angiopoietin-2 (Ang-2) is a naturally occuring antagonist CC fie-2, whereas angiopoietin-2 (Ang-2) is a naturally occuring antagonist CC (Ang-1 fibrinogen domains and dimerized versions, of e.g. Ang-1-FD-FC (Ang-1 fibrinogen domains and dimerized versions, of e.g. Ang-1-FD-FC (CC (Ang-1 fibrinogen domain fused to an FC domain), can bind to the Tie-2 CC receptor with much higher affinity than monomeric Ang-1-FD (dimerization occurs between the FC components of adjacent molecules). However, CC Ang-1-FD-FC is not able to induce phosphorylation (activate) the Tie-2 receptor on endothelial cells unless it is further clustered with goat C anti-human FC antibodies. The novel fusion proteins mutant versions of CC Clustered. Tie-2 agonist fusion proteins may be used as haematopoietic CC diagnose or treat, e.g. myeloproliferative or other proliferative and lenviewise of blood forming organs, e.g. thrombocythemias, polycythemias

Production of homogeneous forms of clustered ligands is broadly applicable CC to improve the affinity and/or increase the activity of a ligand as CC compared to the native form of the ligand. Ephrin fusion proteins have been constructed, which may be useful for treating neurological disorders. The ephrin fusion proteins are preferably capable of binding CC to Elk receptor and are especially Efi-6 antagonists. The fusion proteins are preferably capable of binding CC to Elk receptor and are especially Efi-6 antagonists. The fusion proteins CC were constructed after it was demonstrated that similar improved activities could be achieved using Ti-2 receptor ligands. Angiopoletin-1 (Ang-1) is a Ti-2 receptor ligand and is an agonist for CC fire. The creeptor. The fibringen domains (FD) of Ang-1 and Ang-2 are CC the receptor-binding domains and dimerized versions, of e.g. Ang-1-FD-FC (Ang-1) fibringen domain fused to an Fc domain), can bind to the Ti-2 occurs between the Fc components of adjacent molecules). However, and the Fc components of adjacent molecules. However, the FD-FC is not able to induce phosphorylatrion (activate) the Tis-2 receptor on endothelial cells unless it is further clustered with goat anti-human Fc antibodies. The novel fusion proteins, mutant versions of CC diagnose or treat, e.g. myeloproliferative or other proliferative or diagnose or treat, e.g. myeloproliferative or other proliferative e.g. and lawlends. E.g. myeloproliferative or other proliferative or other proliferati

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                            The invention relates to new isolated soluble polypeptides comprising an amino acid sequence of an extracellular region of an Eph B receptor or an amino acid sequence of an ephrin B ligand, or essentially similar amino acid sequences of extracellular region of an Eph B receptor or an amino acid sequence of an ephrin B ligand. Extracellular region of an Eph B receptor is capable of binding with high affinity to a mammalian ephrin B ligand. Ephrin B ligand is capable of binding with high affinity to a mammalian Eph B receptor. The nucleic acid encoding the polypeptides or the polypeptides are useful for producing pharmaceutical composition for treating a tumour disease or ocular neovascularisation in mammals, is more composition for treating the diseases cited above in mammals, by marns, by means of gene therapy. The present sequence is murine ephrin B2 ligand.
                                                                                                                                                                                                                                                                                                                     New soluble polypeptides of the extracellular region of the Eph B receptor and ephrin B ligands, useful in gene therapy for treating a tumor disease or ocular neovascularization in mammals, including humans
                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2002-405047/43.

              The invention relates to new isolated soluble polypeptides comprising an amino acid sequence of an extracellular region of an Eph B receptor or an amino acid sequence of an ephrin B ligand, or essentially similar amino acid sequences of extracellular region of an Eph B receptor or an amino acid sequence of an ephrin B ligand. Extracellular region of an Eph B receptor is capable of binding with high affinity to a mammalian Ephrin B ligand is capable of binding with high affinity to a mammalian Eph B receptor. The nucleic acid encoding the polypeptides or the polypeptides are useful for producing pharmaceutical compositions for treating a tumour disease or coular neovascularisation in mammals, including humans. The vector is useful in producing a pharmaceutical composition for treating the diseases cited above in mammals, particularly humans, by means of gene therapy. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ocular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                  AAW06333 and AAW06334 represent receptor-type tyrosine kinase receptor binding ligands of the invention. These sequences both have the N-terminal sequence represented by AAW06332. The ligands of the invention recognise the fragment of the receptor type kinase receptor represented by AAW06330 (see AAW06331 for full length sequence). The proteins of the invention have a molecular weight of 23500 (plus or mit 1500) Da, and are positive for Coomassis staining and PAS staining. The protein is a new ligand of receptor-type tyrosine kinases, and can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                          09-NOV-1994;

                                                                                                                                                                                                             AAWI1307 and AAWI1308 represent receptor-type tyrosine kinases. These sequences can be included in the LPM medium of the invention. The medium is used to culture cells capable of producing a ligand for receptor-type tyrosine kinase. The ligand serves as a physiologically active substance to induce enzyme activity and autophosphorylation of tyrosine kinase, which is involved in the development and differentiation of enimal and insect cells. The ligand can also be used as in a pharmaceutical preparation for promoting growth of undifferentiated cells. The medium may also include an inducer, such as insulin, an interleukin, a fibroblast growth factor, or interferon-gamma.
                                                                                                                                                                Sequence

                                                                               The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placents. The probes are useful for antenatal diagnosis of

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 grobes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a conclection of detectably labeled nucleic acids derived from human lung manual to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the enkaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids derived from human lung comprising (c) labeled nucleic acids from eukaryotic genome, comprising continuities and (b) detecting at least one exon from genomic sequences of the enkaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids derived from genomic sequences comprising a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exon in several comprising to the expression of each of the exon in several comprising the expression of each of the exon single exon from genomic sequence by the method above and (b) measuring the expression of each of the exon in several comprising the expression of each of the exon single exon the method above and (b) measuring the expression of each of the exon single exon from genomic sequence by the method above and (b) measuring the expression of each of the exon single exon from genomic sequence by the method above method above and for the exon single exon from genomic sequence is included to the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               03-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc expression of the exons in the tissues and/or cell types indicates that ct the exons should be assigned to a single gene, a peptide comprising one of 120/11 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene cexpression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases cc such as asthma, lung cancer, chronic obstructive pulmonary disease (CODP), interstitial lung disease (TLD), familial idiopathic pulmonary cfibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary chaemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary diveolar proteinosis, Karagener syndrome, fibrocystic culmonary diveolar proteinosis, Karagener syndrome, fibrocystic culmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension cc and hyaline membrane disease. The present sequence is a peptide/protein concoded by a single exon probe of the invention.

CC Mote: The sequence data for this patent did not form part contact of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                     Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary cliary cliary dyskinesis; pulmonary hypertension;
          Spatially-addressable set of single exon nucleic acid probes, used measure gene expression in human lung samples -
                                                                                                                                                                                                                                                           30-JAN-2001; 2001WO-US00665.

Claim 27; SEQ ID No 36059; 634pp; English.

CC from human lung comprising single exon mucleic acid probes for measuring gene expression in a sample derived complements or the 12387 open reading frames derived from the 12614 (CC probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a mucleic acid expressed in the human lung; comprising the novel set of probes which hybridise at high stringency to a collection of detectably labeled nucleic acids derived from human lung, comprising (a) contacting the array with CC a collection of detectably labeled nucleic acids derived from human lung comprising (a) contacting the array with CC a collection of detectably labeled nucleic acids derived from human lung comprising (a) contacting the array with CC a deving a fragment identifying exons in a eukaryotic genome, comprising CC (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detectably bound to each probe of the algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detectably bound to each probe of the comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (b) identifying exons from genomic sequence by the method comprising (c) identifying exons from genomic sequence by the method comprising (c) identifying exons from genomic sequence by the method comprising (c) identifying exons from genomic sequence by the method comprising (c) identifying exons from genomic sequence by the method comprising (c) identifying exons from genomic sequence by the method comprising (c) identifying exons from genomic sequence by the method comprising one of the probes of the exons in several comprising (c) identifying exons from genomic sequence by the method comprising one of the comprising one of the probes of the probes for gene particularly comprised to the probes of the season of gene particularly disease. (COPD), introduction the probes of the Sequence ftp.wipo.int/pub/published_pct_sequences. The invention relates to a spatially-addressable set of single exon 136 AA;

                                                                                                                                                                                                                                                                                                                                                                     The patent discloses a complex comprising of a B class ephrin and PDZ domain containing protein. B class ephrins function as ligands for Eph receptor tyrosine kinases (RTK) and possess a transmembrane element and a highly conserved cytoplasmic tail at the C-terminus, that contains a PDZ binding site. This complex is used in methods to modulate the interaction of a B class ephrin and PDZ domain containing protein and to identify modulator compounds. It is also used for modulating cellular processes like, axonogenesis, nerve cell interactions and regeneration of nerve cells. The complex is also useful for treating proliferative or differentiative disorders associated with this protein complex. The present sequence is the human ephrin B2 C-terminal cytoplasmic domain, comprising conserved sequences reminiscent of known or predicted domain, sites for PDZ domains. Ephrin B2 is also known as Htk-L, ELF-2, province of the process of the process
